AVIRA RESOURCES LIMITED - QUARTERLY ACTIVITIES REPORT (JUNE 2020)

Avira Resources Limited (ASX: AVW) (**Avira** or the **Company**) wishes to advise on the following activities during the quarter ending 30TH June 2020.

Operational Activities

Avira currently holds two tenements within the Paterson province, a region that hosts a number of substantial gold, copper and manganese mines and deposits, including the Telfer gold-copper mine. Subsequent significant discoveries in 2018/19 made by Rio Tinto (Winu project) and the Newcrest-Greatland Gold JV (Havieron project) has reinvigorated interest in the province.

Figure 1. Location of the Mount Macpherson and Throssel Range Projects

During the quarter, the Company finalised negotiations and signed the Land Access and Mineral Exploration Agreements with the Western Deserts Land Corporation (Jamukurnu-Yapalikunu) on the 29th June 2020 for both projects. With the application for Mount Macpherson E45/5572 subsequently granted on the 13th July 2020. The Throssel Range exploration licence (E45/5567) is expected to be granted in August 2020 upon conclusion of the current notice period.

The Avira projects are situated in the Yeneena basin sedimentary rock formation that hosts both the Nifty and Maroochydore copper deposits.

Both of Avira's projects border the Encounter Resources/IGO and the Metals X/IGO Joint Ventures with the south western boundary of Mount Macpherson in close proximity to the magnetic anomaly associated with Encounter's Aria Prospect, with an interpreted NE trending structural corridor projecting onto E45/5572 (see Figure 2).

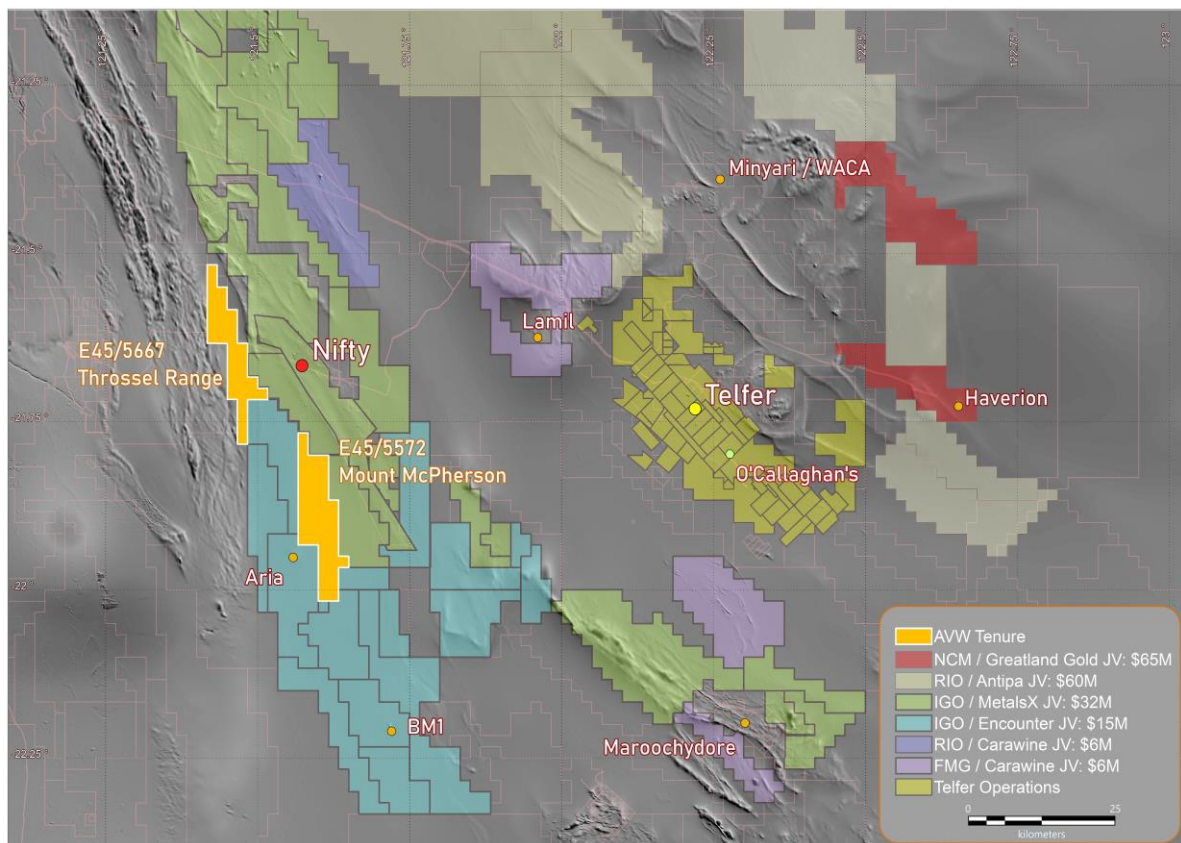

Figure 2. Location of Avira's Paterson Projects in relation to major mines and emerging copper-gold prospects showing committed exploration expenditures by major joint ventures in the region.

The Company immediately mobilised an exploration field team to the area and engaged NRG Australia Limited to complete phases 1&2 of its planned exploration program including geological mapping, geo-chemical soil sampling and to conduct an airborne geophysics survey over the project area.

Phase 1: Regional Geochemistry & Geological Mapping

It is planned that the field team collect up to 1300 soil samples and conduct rock chip sampling of the vein, fault and structural targets identified in the outcrop areas on Mount Macpherson.

Soil sampling is intended to develop a data set of precious, base metal and trace element pathfinder geochemistry in areas of outcrop and sub-outcrop areas. This database will complement the airborne EM data and provide insights as to whether any conductive bodies are associated with hydrothermal mineralisation.

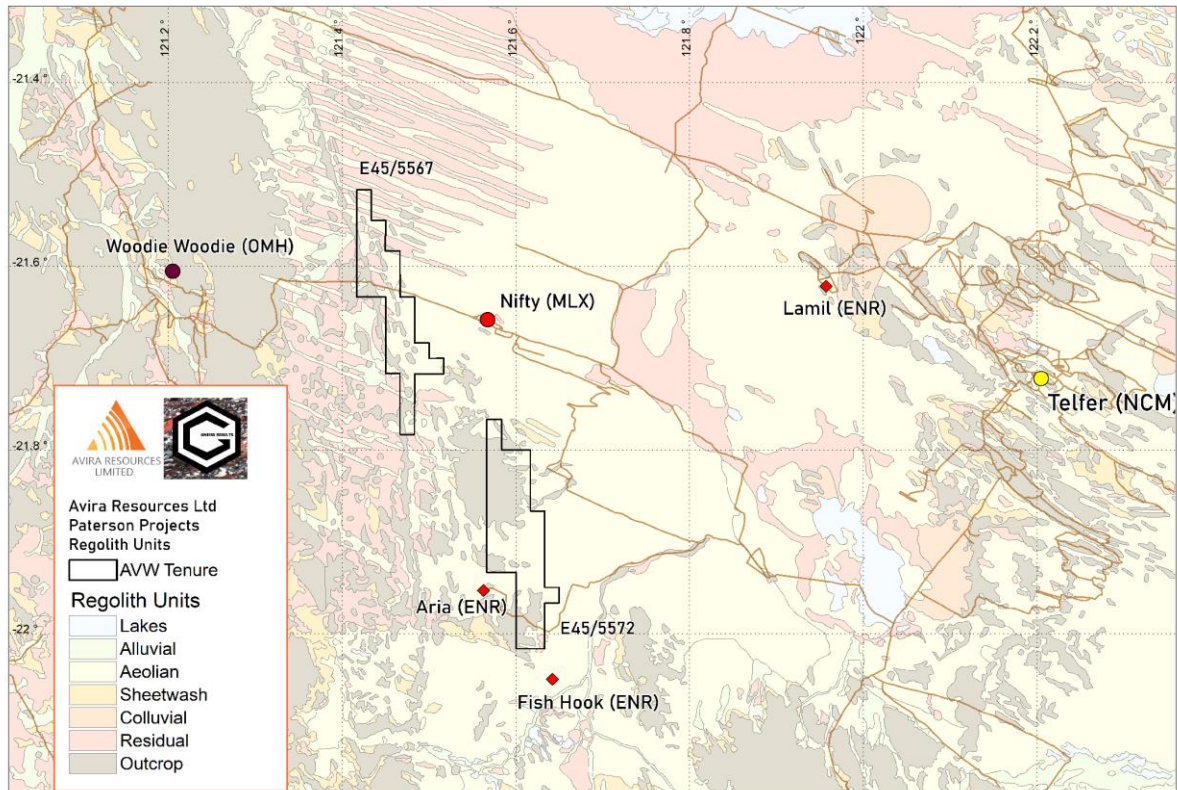

Figure 3. GSWA Regolith landform map of the Paterson highlighting outcrop on AVW's Paterson Projects

Outcropping geology and shallow cover exist across both tenements. Significant areas of the Throssel Range and Mount Macpherson tenements are outcropping, with the remainder shallowly covered by aeolian dune fields, with potentially minor areas of shallow glaciogene sediments (Figure 2). Cover is likely to be less than 50m thick, contrasting with ~100m in Lamil, and +400m in the Haverion area. Shallow cover provides advantages in exploration as conventional soil geochemistry can be used, structures mapped and understood, and better resolution with deeper penetration of VTEM is expected.

Avira has engaged two experienced senior geologists to undertake a comprehensive structural map and to validate the photogeological interpretation. Preliminary results are expected within the September quarter.

Phase 2: Airborne EM Survey

Avira has engaged NRG Australia Pty Ltd (NRG) to complete a high-resolution helicopter borne Xcite™ electromagnetic and magnetic survey over the project area. Upon grant of Mount Macpherson, NRG has mobilised to site and commenced operations. The survey being undertaken is a 200m spaced, low-level helicopter borne airborne electromagnetic (AEM) survey.

This survey will map conductive stratigraphy, provide some structural information, identify prospective conductors and map conductive regolith (e.g., Permian channels), and provide areas of interest for ground truthing and drilling. Initial results and preliminary interpretations are expected to be delivered 4 to 6 weeks post the completion of the survey.

LIMITED

Phase 3: Exploration Drilling

The Company intends to drill the Paterson Projects pending receipt and interpretation of the geochemistry and geophysical data and the generation of any anomalies which warrant follow-up work. The timing of drilling will be contingent upon receipt of all statutory approvals including heritage clearances and satisfactory weather. The opportunity to mobilize and commence drilling early in the 4th quarter of 2020 is expected.

Pyramid Gold Project, Queensland

Indicative estimated costings of potential follow-on exploration programs are currently being worked up and will be presented and considered in due course as AVW continues to identify and assess the value of additional exploration expenditure in the East Pyramid Range against other opportunities consistent with the Company's focus on creating value for its shareholders in the resource exploration space.

Southern Queensland Projects

No significant exploration work was undertaken on the Southern Queensland Project during the June quarter.

Corporate Activities

The Company completed a share placement (**Placement**) to raise A\$500,000 through the issue of 250,000,000 ordinary shares at \$0.002 (refer ASX announcement 28th May 2020). Shareholder approval for the Placement was obtained at the General Meeting of Shareholders held on the 3rd July 2020.
